WRITTEN OPINION OF THE
INTERNATIONAL SEARCHING AUTHORITYInternational application No.
PCT/EP2004/010639

P2004010639 23 MAR 2006

Box No. 1 Basis of the opinion

1. With regard to the **language**, this opinion has been established on the basis of the international application in the language in which it was filed, unless otherwise indicated under this item.
 - ☐ This opinion has been established on the basis of a translation from the original language into the following language , which is the language of a translation furnished for the purposes of international search (under Rules 12.3 and 23.1(b)).
2. With regard to any **nucleotide and/or amino acid sequence** disclosed in the international application and necessary to the claimed invention, this opinion has been established on the basis of:
 - a. type of material:
 - ☐ a sequence listing
 - ☐ table(s) related to the sequence listing
 - b. format of material:
 - ☐ in written format
 - ☐ in computer readable form
 - c. time of filing/furnishing:
 - ☐ contained in the international application as filed.
 - ☐ filed together with the international application in computer readable form.
 - ☐ furnished subsequently to this Authority for the purposes of search.
3. ☐ In addition, in the case that more than one version or copy of a sequence listing and/or table relating thereto has been filed or furnished, the required statements that the information in the subsequent or additional copies is identical to that in the application as filed or does not go beyond the application as filed, as appropriate, were furnished.
4. Additional comments:

compensate the level stress in the two opposite senses of deviation, when the stress falls out of the range limited by further upper and lower thresholds. However, this compensating action can be derived from D1, figure 3, where the controlled load will be operated like this, in combination with another sensed magnitude. The difference between these claims and the device/method in D1 will be this simplification. Apart from the obviously and consequently simpler design of the responsive load controller the only result of the omission of the consideration of a second variable is that the effects related to this are no longer present in the controller. Such a simplification does not involve an inventive step (Article 33(3) PCT).

INDUSTRIAL APPLICABILITY

4.1. The industrial applicability of the invention is out of doubt.
